

Supplementary Table 2. Bone marrow output in neonates with a GA<35 weeks measured within 3 days after birth

Variable	Extreme SGA (n=280)	Moderate SGA (n=185)	Controls (n=1,475)	P value
Erythrocyte count (10^{12} cells/L)	4.31 (3.81–4.83)	4.32 (3.80–4.81)	4.21 (3.72–4.73)	0.074
Hemoglobin concentration (mmol/L)	10.50 (9.40–11.70)	10.30 (9.20–11.50)	9.80 (8.70–10.90)	<0.001
Mean corpuscular hemoglobin (fmol)	2.46 (2.31–2.56)	2.40 (2.33–2.55)	2.32 (2.23–2.42)	<0.001
Mean corpuscular volume (fL)	115.00 (110.00–121.00)	114.00 (110.00–118.00)	109.00 (105.00–115.00)	<0.001
Thrombocyte count (10^9 cells/L)	164.00 (119.00–210.00)	193.00 (150.00–237.00)	224.00 (182.00–272.00)	<0.001

Values are presented as median (interquartile range).

GA, gestational age; SGA, small for gestational age.

Boldface indicates a statistically significant difference with $P<0.05$ using Kruskal-Wallis test.
